

Generation Industry Overview

The generation industry has an unconditional commitment to training and development for producing a workforce that is competent, proficient and able to work across a range of functions while using a range of equipment and technology.

Consistency in the application of skills and knowledge across the industry will assist enterprises in acquiring employees that have the relevant skill types required to meet the needs of the business. Through relevant training, employees will be better equipped to respond to technological innovation and changes in work practices and work organisation. Thus ensuring enterprises are efficient, effective and retain their competitive edge.

Within the Electricity Supply Industry – Generation sector a range of Apprenticeships are offered to individuals wishing to develop a successful and rewarding career in the Power Generation industry.

People employed in the ESI Generation industry can be found working in most sectors. Principal areas include:

- Electricity generation from Coal and Gas sources

- Electricity generation from Renewable energy sources
